

Implementing formal policies and procedures, along with a professionally supported asset tracking system will help control and manage the fixed asset register. Professionally supported fixed asset management software with barcode tracking technology will reduce the time and money spent managing assets. Physical audits allow organizations to locate and manage ghost and zombie assets, comply with corporate governance requirements, ensure proper insurance coverage and facilitate accurate reporting.

What is Asset Management?

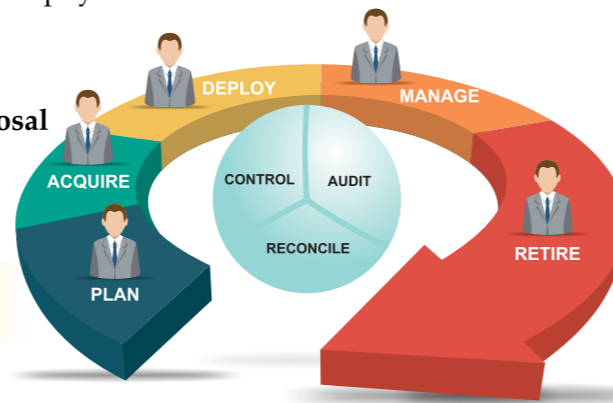

ISO 55000 defines Asset management as the “coordinated activity of an organization to realize value from assets”. In turn, Assets are defined as follows: “An asset is an item, thing or entity that has potential or actual value to an organization”. This is deliberately wider than physical assets but these form an important focus for most organizations.

3 Critical aspects of current form of Asset Management

- 🔥 Use of automation for asset creation – allocation – management - disposal
- 🔥 Optimized use of resource available
- 🔥 Better Quality & Financial control over assets
